index

This is an index that explains the attachments with the project and how to run the project. The admin user can also use it if she wants to access the dashboard.

How to run the project

To run the project, follow these steps:

Backend:

Navigate to the Backend Directory:

Open your terminal or command prompt.

Change directory to the IEM Ecommerce backend folder.

Install Dependencies:

Run npm install to install all the required dependencies listed in the package.json file.

Start the Server:

You have two options to start the server:

Production Mode:

Run npm start.

Development Mode (with Nodemon):

Run npm run dev.

The server will start running, and you should see a message indicating that the server is listening on a specific port.

Frontend:

Navigate to the Frontend Directory:

Open another terminal or command prompt window.

Change directory to the IEM Ecommerce frontend folder.

Install Dependencies:

Run npm install to install all the required dependencies listed in the package.json file.

Start the Frontend Development Server:

Run npm run dev.

This command will start the development server using Vite, and it will automatically open a new tab in your default browser with the frontend application running.

Now, your backend server and frontend development server are up and running. You can access the frontend application by opening the provided URL in your browser.
